
ABSTRACT

a!

In order to provide a data distribution system that is capable of distributing, to a mobile communication terminal at a specific location, information suited for the location, e.g., guide information, and that is capable of allowing anyone to easily and freely access information, there is provided a data distribution system communicating with a mobile data communication device that is capable of obtaining current position information indicating a current position. The system is equipped with data communication means for sending and receiving data to and from the mobile data communication device and means for storing information storing area position information indicating a position of a specific area and information associated with the specific area. Control is provided so that, if the mobile data communication device is located in the specific area, information associated with the specific area is sent to the mobile data communication device via the data communication means.
